Multi-Agent Robotics Fielding Systems Engineer

Engineering R5900 Regular Pasadena California

[Apply Now > \(https://citjpl.jobs/jpl-us/jobs/5900\)](https://citjpl.jobs/jpl-us/jobs/5900)

Job Details

New ideas are all around us, but only a few will change the world. That's our focus at JPL. We ask the biggest questions, then search the universe for answers. We build upon ideas that have guided generations, then share our discoveries to inspire generations to come. Your mission—your opportunity—your challenge is to find the answers that bring us one step closer. If you're driven to discover, create, and inspire something that lasts a lifetime and beyond, you're in the right place.

Located in Pasadena, California, JPL has a campus-like environment situated on 177 acres in the foothills of the San Gabriel Mountains and offers a work environment unlike any other: we inspire passion, foster innovation, build collaboration, and reward excellence.

This position is for a *Robotics Systems Engineer* with skills in fielding complex multi-agent robotic systems for the **Multi-Agent Robotics Group Mobility & Manipulation Section**.

The Robotic Mobility & Manipulation Section develops, matures, and brings to space flight, robotics technology for in-situ exploration of the solar system. Activities include sampling, manipulation, and mobility systems for planetary bodies (Moon, Mars, Venus, Europa, Enceladus, etc...). The Section leverages robotics expertise for space flight hardware and software implementation along with mission operations support.

Opportunity: To work with an enthusiastic multi-disciplinary workforce that originates and executes robotics technology development and space exploration applications. This role is focused on fielding complex robotics multi-agent aerospace systems on planetary robotic vehicles in support of JPL and other missions. The role requires familiarity with various aspects of a robotic system and ability to interface with a government team, and JPL engineers and other partners to successfully deploy our robotics multi-agent solutions in often challenging environments.

Required Qualifications:

- Bachelor's degree in Computer Science, Electrical Engineering, Robotics, or related discipline with a minimum of 6 years of relevant experience or a Master's degree in a related discipline with a minimum of 4 years of relevant experience or a Ph.D. in a related discipline with a minimum of 2 years of relevant experience.
- ROS/ ROS 2 expertise (DDS and other, C++, Python, RViz, Fox Glove) and Linux on embedded platforms (Nvidia family of products, Raspberry Pi, etc...).
- Experience setting up and running a large, production quality codebases including version control and CI/CD pipelines in very rapid turnaround month field test cycles and daily integration during field test events).
- Proven knowledge of low-level software integration (e.g. embedded systems, sensor drivers for ROS2), high-reliability / safety-critical code 'sandboxes' for research code), tooling (optimizing development environments, docker, CI/CD, systems admin), hardware / sensor / payload integration).
- Experience running robotic field tests and proven knowledge of robotics field test safety requirements.
